

State of Art Technology

SkyClean[®]

Experts in Warehouse and Building Cleaning

*unique solution,
affordable,
eco-friendly*

Inefficient, energy consuming cleaning techniques or the abundant use of clean water is simply not an acceptable solution in today's environment. SkyClean achieves a durable and first class clean with the minimal use of natural resources. The key word is innovation.

State of Art Technology

SkyClean uses state of art technology to clean the cladding on large distribution facilities, high bay warehouses and cold and freezing depots. Being controlled remotely from the ground, SkyClean sprays detergent onto the surface whilst the crane driver lowers SkyClean to ground. The large rotary brush is then started and SkyClean is lifted up to the top of the building again, the rotation of the brush is then reversed on the decent, giving a thorough clean of the surface.

Huge Capacity

SkyClean is far ahead of traditional manual cleaning methods

and has the capacity to clean up to 3,500 square meters of cladding per day. This large capacity ensures that any disruption to your facility is kept to an absolute minimum.

Safety

By using specialist cranes and controlling SkyClean remotely from the ground guarantees that the cleaning process can be completed with the highest levels of Health and safety. This ensures that our operatives, your staff and the general public are never put at risk during the cleaning process. Before work commences we provide an Outline Plan, a full Site Specific Safety Method Statement, together with Risk, COSHH and Noise assessments.

Exceptional Quality

By using a specialist detergent, which is matched to the type of surface we are cleaning, ensures that SkyClean achieves the best possible clean of your facility. The detergent is applied before SkyClean brushes the surface with its rotating brush and once

rinsed off with water it gives a first class, long lasting clean to your building. By using SkyClean your facility will stay clean longer, reducing the overall cost of your maintenance budget.

Environmentally Friendly

SkyClean cares for the environment and the detergents we use once mixed with water have a PH factor of 7, which is not harmful or hazardous to skin, eyes or the environment. Further to this, we can also collect used water during the cleaning process and remove it from your facility.

Total solution

SkyClean offers a total solution to its clients, which goes far beyond the cleaning of your facility and includes all aspects from initial planning and advice, health & safety to the cleaning project itself.

Mr. R. Land

Facility Specialist

DHL Global Forwarding

"I am very pleased with the high quality of clean that SkyClean produced on our distribution centre. The liaison between your workers and our staff was excellent. And despite running a 24/7 operation we did not experience any disruption to the running of our business, this was due to excellent planning and consultation in advance"

Mr. B. van den Broek

Manager Fleet and Maintenance

Kuehne + Nagel Logistics

"SkyClean is without any doubt the best solution for cleaning and maintaining our high bay warehouse, it is fast, safe and affordable."
